

Computer Systems Analyst (CAGIS) (12-085)

City of Cincinnati Job Opportunity

Exceptional Appointment - Announcement# 12-085

(Open to the Public and to City Employees)

Salary: \$64,148 - \$86,210 annually

The Enterprise Technology Solutions Department is seeking to fill a Cincinnati Area Geographic Information System (CAGIS) Computer Systems Analyst position with a highly motivated individual with strong technical expertise in multiple areas including enterprise spatial database management (preferably Oracle) with skills in ESRI Geodatabase, ArcGIS server and SQL report development. This position is responsible for ensuring the mission critical operations of CAGIS infrastructure that includes GIS and business process databases, design and maintenance of spatial databases and configuration and operations of ArcGIS Map services server delivery systems. The person who fills this position must demonstrate experience functioning in a complex integrated GIS technology environment and be proficient in the development of complex integrated solutions.

The person who fills this position must fulfill the following requirements:

- Ability to perform in depth research, gather information, perform analysis, tests, evaluations and translate business process documentation into functional requirements for data design.
- Ability to work effectively in a team environment, effectively communicate verbally and in writing with various users and team members.
- Demonstrate skills in database management of business systems and geospatial technologies using the ESRI Enterprise GIS technologies.
- Knowledge of programming and scripting with Python, VB.Net, etc for automating processes.
- Knowledge writing and interpreting SQL and stored procedures and generating reports.

Evidence of the appropriate skill set shall include current users who could be contacted for references.
