

JOB DESCRIPTION FOR LOCAL HIRE GIS SPECIALIST, FEMA-4058-DR-IN, 2012

The candidate needs to be able to perform a wide variety of analysis, design, programming, testing, editing, installation, integration, maintenance, operational support, and troubleshooting, for FEMA's Field Operations at a Joint Field Office, using Esri GIS systems.

This is a professional level, technically oriented position that requires the ability to continuously learn and apply new technical skills and client information processes. This position extensively uses geometric networks and ESRI's ArcInfo. Perform utility network editing and create a wide variety of map presentation products. Writes and or manipulates programs for data maintenance to improve application efficiency for FEMA's GIS in a response and recovery environment.

This is a temporary, full time position.
Fingerprinting and a background check is required.

Candidates should expect to work long hours.
Candidates should be informed of non-availability of benefits.
Emphasize flexibility to work schedules which can change without notice.
Ability to work in stressful conditions for extended period of time.

Please send resumes to Marianne.Barnard@FEMA.dhs.gov
